Brief Description of Arguments to be Presented:

While Jain shows both (i) the use of data for authentication and (ii) the receipt of "network data" (as is well known in the art), Jain does *not* show that the *network data* are used for authentication. In keeping with traditional authentication schemes, Jain completely separates network data from the data used to authenticate a user. The pending independent claims use the network data as authentication data contrary to the teachings of Jain.
